Profile

Full-stack developer skilled in Node.js, Express.js, MongoDB, and React, with experience building RESTful APIs and AI-powered applications using LangChain, LangGraph, and LLM APIs (Gemini, Mistral, Cohere). Currently deepening backend expertise in system design, Redis, and AWS to target backend engineering roles.

Education

M.Sc. (Computer science) <i>Pune Vidhyarthi Gruha's college of Pune.</i> Passed with 7.60 CGPA	2022 – 2024 Pune, India
B.Sc. (Computer Science) <i>Abhinav Education society college of computer science and management</i> Passed with 7.47 CGPA	2019 – 2022 Pune, India

Skills

JavaScript, TypeScript, HTML, CSS, SQL, React.js, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, Git/GitHub, Langchain, LangGraph

Projects

AI-BattleGrounds

A full-stack platform where user queries are simultaneously sent to two LLM contestants **Mistral** and **Cohere** each generating a response along with a self-score out of 10. A **LangGraph** orchestrated pipeline runs each model as an independent node in a directed graph, feeding their outputs into a **Gemini-powered judge node** that evaluates both and declares a final winner with a score.

Built with a modular architecture cleanly separating graph logic, model integrations, and API handling.

Tech Stack: Backend tech stack is Typescript, Node.js, Express.js, LangGraph, Mistral AI, Cohere API, Gemini API. Frontend tech stack is React.js, Tailwind CSS, Context API

Tools : Render, Git/GitHub, Postman.

Moodify Player

A mood-driven music player that uses **MediaPipe Task vision** facial expression detection to analyze the user's real-time mood and automatically curate and play matching music.

Built with a clean full-stack architecture featuring **JWT authentication with Redis-based token blacklisting**, **ImageKit** for media storage, and **Context API** for global state management.

Tech Stack: Backend tech stack includes Node.js, Express.js, MongoDB, Redis, ImageKit, MongoDB. Frontend tech stack is React.js, SCSS, Context API **AI/ML MediaPipe** (facial expression detection).

CogniSearch

A full-stack **ChatGPT inspired** conversational AI platform powered by **LangChain**, featuring a clean chat interface with persistent conversation history and a collapsible sidebar for session management.

Also includes a **RAG pipeline** that accepts PDF documents, generates embeddings via **Mistral's embedding model**, stores them in **Pinecone**, and enables context-aware chat over the uploaded document (API complete, UI in progress).

Built with a modular architecture using **Redux Toolkit** for Auth state management and for handling message flows.

Tech Stack: Backend tech stack includes Node.js, Express.js, LangChain, Socket.io, MongoDB, Pinecone. Frontend tech stack include React.js, Tailwind CSS, Redux toolkit.

Current learning

System Design, AWS services, Database Optimization, TypeScript, Redux Toolkit
